EDUCATION

DELHI TECHNOLOGICAL UNIVERSITY Dec 2021 - June 2025
Bachelor of Technology(BTech)
Cumulative GPA: 8.13;

DOON PUBLIC SCHOOL June 2021
CBSE 12th-89% 10th-88%

WORK EXPERIENCE

KYC HUB **Remote**
Software Engineer **Jan 2026 - June 2026**

- KYC Hub is a B2B platform providing AI-driven AML and KYC compliance solutions to automate risk intelligence for the global fintech ecosystem.
- Designed an agentic system to automate the onboarding of global compliance sources, reducing manual engineering overhead in scraper development.
- Utilized Temporal to manage scalable workflows and activities for complex data extraction processes, ensuring reliable execution of long-running agentic tasks.
- Engineered workflow that autonomously analyse DOM structures to generate execution plans, validation logic, and schema mappings to be used to create scripts for structured data extraction.

SHORTHILLS AI Gurugram, Haryana
Software Developer Intern **Feb 2025 - Aug 2025**

- Built an AI-powered candidate matching system using Elasticsearch and Azure OpenAI to automate hiring rank generation.
- Developed robust resume parsers for multi-format documents using LlamaParse and Tesseract OCR for scalable data extraction.
- Applied OpenAI text-embeddings to compute semantic similarity for highly precise candidate retrieval.
- Automated role-specific resume generation in company format to effectively streamline hiring workflows.

HUGHES COMMUNICATION INDIA Gurugram, Haryana
Software Development Intern June 2024 - Aug 2024

- Developed a real-time Python terminal tracking system with live geospatial data via REST API integration.
- Engineered geofencing logic for automated internet restriction based on coordinate radii and location.
- Designed a SQL-backed spatial query system and interactive mapping UI with JS and OpenStreetMap.

PROJECTS

RESEARCH PAPER ANALYSER

- Engineered a Live RAG system using LangChain and Groq to enable intelligent querying of complex research papers, achieving high-speed inference with optimized latency.
- Implemented advanced semantic retrieval pipelines using Google Gemini and FAISS vector embeddings, allowing for context-aware document analysis and accurate information extraction.
- Designed a modular architecture to handle multi-modal input processing, enhancing the chatbot's capability to parse intricate diagrams and mathematical notation.
- Github: Research-paper-analyser

AUTOMATED QUALITY SIGN-OFF (Hughes Communication India)

- Developed a deep learning model using CNN and YOLOv8 to detect and verify correct dish antenna placement from field imagery.
- Automated the quality sign-off process through image-based analysis, significantly reducing manual inspection time and improving operational efficiency.

TECHNICAL SKILLS

Languages: C++, Python, Javascript
Technologies/Frameworks: Pandas, Flask, Pytorch, OpenCV, REST API, Django, Fast API, SQL, Selenium
Core Skills: Data structures, Algorithms, Machine Learning, NLP
Developer Tools: Linux, Git, VS Code, Microsoft Office, Jupyter, Azure, AWS
